

WinPath Methodology for SAP

ObjectWin's WinPath Methodology for SAP solution, comprised of several items, can be used together or individually with client-provided elements.

Methodology

Our solution extends and complements SAP's ASAP methodology. We place more focus on ROI, leveraging predefined content, program, risk and change management, industry's leading practices and metrics, continuous knowledge transfer with key business users and testing.

Assets

Our methodology contains pre-defined deliverables developed and used on various successful SAP projects. These consist of project management documentation, process flows, configuration guides, conversion scripts, design documents, training materials, test scripts, integration test cycles and more. Assets exist for the core SAP ERP modules, as well as for upgrades and global rollouts.

Team

A team of experienced consultants, working side-by-side with team members, provide hands-on validation of the system, training and knowledge transfer throughout the implementation process.

Phases and Work Packages in WinPath Methodology

Organize	Outline Strategy	Define Project Objectives	Establish Project Team	Conceptual Design	Infrastructure Analysis	Define Scope	Quality Review Process
Plan	Define Business Process	Prepare Detail Design	Establish Technical Environment	GAP Analysis	Finalize Project Scope	Project Team Training	Quality Review Response & Corrective Action
Construct	Baseline Configuration	Configuration Training	Customize Final Configuration	RICEF Object	System Security	End User Documentation	Quality Review Response & Corrective Action
Deploy	Integration Testing	Volume & Stress Testing	End-User Training	User Acceptance Testing	Cut-over Plan	Go-live	Quality Review Response & Corrective Action
Operate	Cut-Over Operation	Production Operation	Change Control Procedures	Post-Production Support	System Readiness Audit	Quality Review Response & Corrective Action	Validate Project Scorecard

Overall, the WinPath methodology approach covers the complete project life-cycle from requirements analysis to implementation, testing and support. The solution at its fullest is end-to-end in its scope.

Key Benefits:

- Small to large enterprise implementation experience
- Pre-built, process-driven templates
- Best practices approach
- Focus on value-added activities
- Facilitates the "Center of Excellence" approach
- Platform for continuous process improvement
- Facilitates hands-on training and continuous knowledge transfer
- Standardized methodology for globally dispersed virtual team deployment
